Spectroscopy Conference held in Rumania Muszaki Egyetem Fizikai Kemiai Tanszeke) SOURCE: MTA. Kemiai tudomanyok osztalyanak kozlemenyei, v. 24, no. 1, 1965, 79-83 TOPIC TAGS: chemical conference, spectroscopy ABSTRACT: The conference was held in Bucharest between 29 Nov and 5 Dec 64, and was organized by the Committee on Spectroscopy of the Rumanian Academy of Sciences. The topic of the conference was emission and (UV, IR, Raman and radio-wave) molecular Spectroscopy. A total of 215 persons participated, most of them from Rumania, but the following countries were also represented (in decreasing order of number of participants): Hungary, East Germany, Bulgaria, Yugoslavia, Czechoslovakia, Poland, Japan, England, Italy and USSR. Of the Hungarian participants, Istvan Kovacs discussed the spectroscopic study of diatomic molecules; Karoly Zimmer the methods used for constructing the blackening curve; and L. Almasi was co-author, with H. Hantz, of a paper dealing with IR-spectroscopic measurements of various esters of arylsulfonamidophosphoric acids. [JPRS: 35,397] SUB CODE: 07 / SUBM DATE: none

Zimmerer, K.

TITLE:

A new technique of connecting coupled transistorized telephones

PERIODICAL:

Referativnyy zhurnal. Avtomatika i radioelektronika, no. 6, 1962; abstract 6-8-36 shch (Nachrichtentechnik, 1961, 11, no. 11, Fernmelde-Praktiker, 1, no. 11, 85-87)

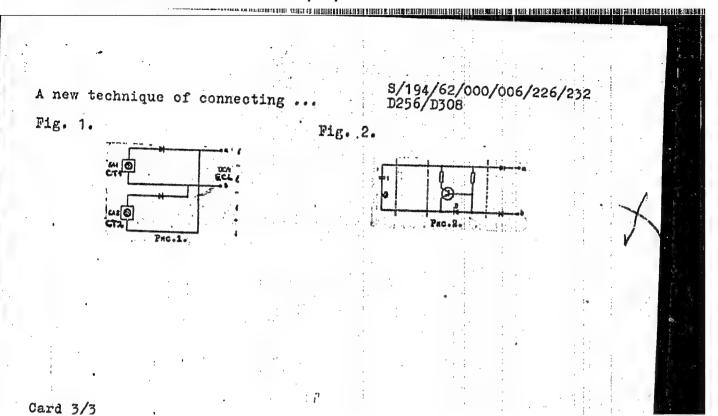

TEXT: A report on experiments in the development of electronic assemblies for trunk lines (coupled telephones) which have been conducted for a long time by the Dresden Post and Electro-communication Institute (GDR). Germanium and silicone diodes were used as coupled telephones is shown in Fig. 1. The first coupled telephone is shown in Fig. 1. The first coupled telephone sign is sent from the exchange trunk line (ETL) when a (-) through the wire b. The connection of the telephone CT2 with the

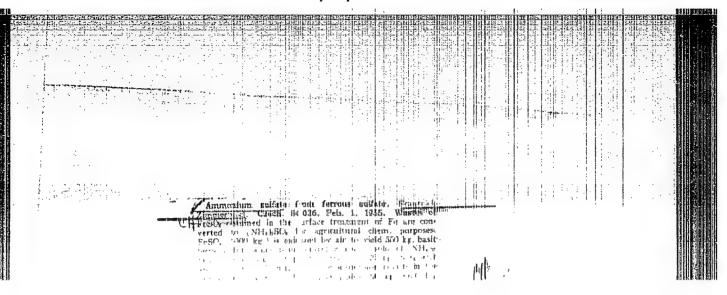

A new technique of connecting ...

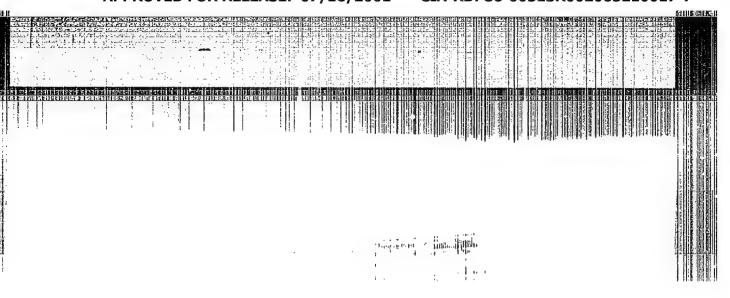

S/194/62/000/006/226/232

SECTION ASSESSMENT OF THE SECTION OF

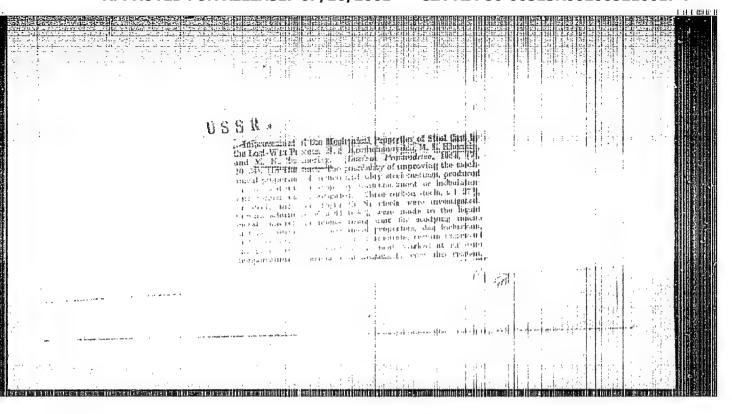

to the exchange from one of the CT automatically disconnects the other one. The possibility of interception of the calls is excluded. The calling circuit shown in Fig. 2 comprises: a capacitor in the bell circuit of the subscriber apparatus, a diode and a transistorized device for discharging the capacitor. The possibility of simultaneous transmission of a call to both CT's is excluded by means of a 60 V DC bias. The connection to the desired CT is obtained by selecting the appropriate polarity, as in electro-magnetic relay systems. The electronic assemblies of the coupled telephones can be adapted to the existing subscriber selecting systems by means of transistorized polarity-reversing switches, scanning the subscriber lines continuously. The electronic assemblies have several substantial advantages in comparison with the relay systems: constant supervision is not required, they are easier to construct and install and are considerably more compact and with the expansion of the semiconductor industry they will become much cheaper. "Importance of Correct Transportation in Craniocerebral Injuries"

Zagreb, Lijecnicki Vjesnik, Vol 88, No 5, pp 469-472

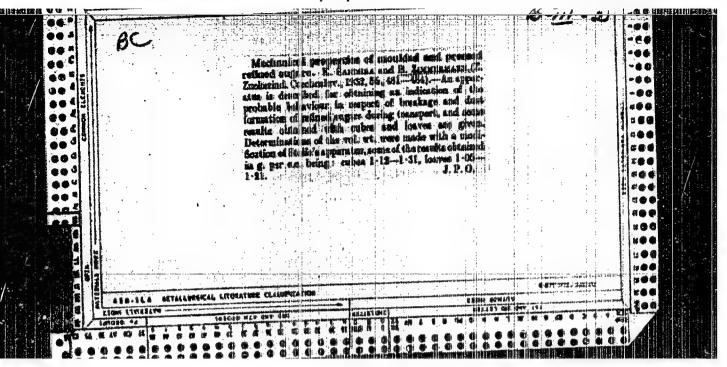

Abstract: Experience acquired at the Traumatology Hospital, Zagreb, indicates that persons with cramiocorebral injuries must receive treatment during transportation. This treatment must include artificial respiration and administration of oxygen. Treatment of this type is more important for survival than speed of transportation to a hospital after accidents involving cramiocorebral injuries; speed in transportation may often have a harmful effect. peritoneum in puppies. He finds a deepening of the serous sheath not only in females, as described in the textbook, but also in males: the "excavatio rectogenitalis and vesicogenitalis". The genito-urinary plication continues caudally into the serous membrane which lines the cavity and invests the viscera situated here. In the recto-genital cavity the inferior border of the serous membrane forms a cover for the ductus deferens and the ureters and, insinuating itself between the rectum and the ureter, reaches the muscles of the sexual apparatus or extends nearly to the skin of the perineum. — M. "Some Biochemical Changes in the Blood of Sheep After Intensive Bleeding."

Prague, Veterinarni Medicina, Vol 11, No 8, Aug 66, pp 517 - 522

Abstract Authors' English summary modified 7: The response of certain intermediary metabolites in the blood of adult sheep to a blood letting of 1850 ml of blood within 10 days was investigated for a period of 38 days. The curves of the levels of glucose, hexoses bound to serumproteins, and beta-hydroxy-butyric acid show a maximum increase between the 5th and 11th days after blood letting and a second maximum after 20 days. Non-esterified fatty acids show an increase to a maximum on the 5th day and then decrease steadily. Albumins and gammaglobulins reach a minimum on the 11th day, and then start increasing. No

TITLE: The digital tachometer

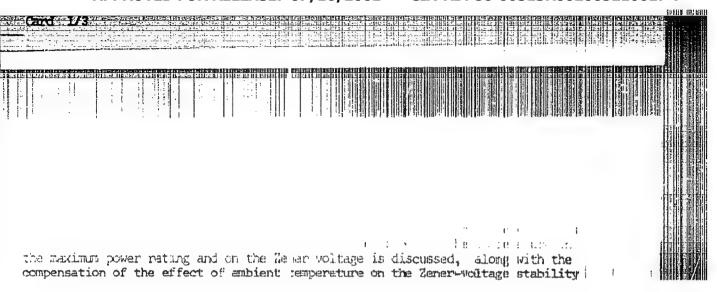

SOURCE: Danzig. Politechnika. Zeszyty naukowe, no. 66, 1965. Łaczność, no. 13, 69-85

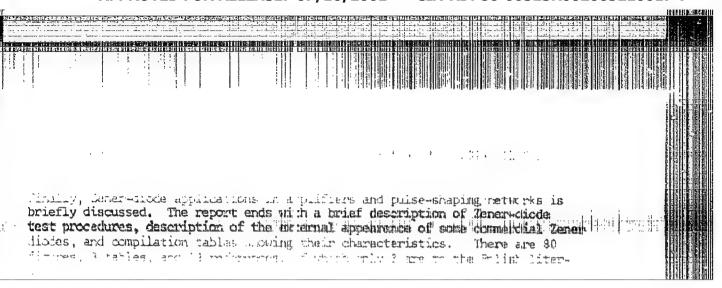

TOPIC TAGS: tachometer, digital device, telecommunication

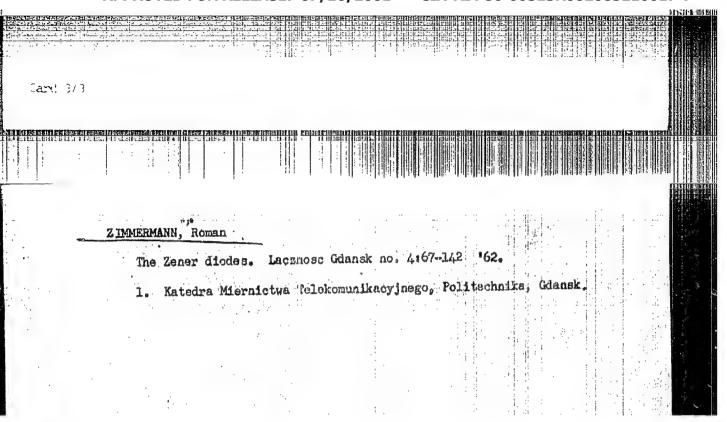

ABSTRACT: Description of an electronic digital tachometer designed by the authors is given. Such a tachometer offers a high accuracy of measurement, yields the results in form of discrete figures, facilitates transmission of the results over a distance, a rapid and easy repetition of the measurements, and records the data on a tape. The tachometer consists of three parts: a sensing element, a gate system, and a counter. The basic component of the gate system is a gate generator. It is keyed by a quartz crystal having oscillation frequency of 125 kc and a temperature coefficient 4 x 10<sup>-6</sup>/C. The counter, selected on the basis of economical feasibility as well as the need to use domestic products, consists of Philips ElT decades. It is expected that domestically produced total counter decades, having printed circuits and digital indicators, will be introduced shortly. Two types of sensing elements are used, de-
